

Nanobodies® – Powerful platform generating innovative drug candidates

Ablynx is dedicated to creating new medicines which will make a real difference to society. The Company develops Nanobodies®, proprietary therapeutic proteins based on single-domain antibody fragments. Due to their small size and unique structure, Nanobodies offer multiple advantages making them ideal building blocks for the generation of novel highly potent biological drugs. Ablynx has over 45 proprietary and partnered programmes in development across various therapeutic areas including inflammation, haematology, immuno-oncology and respiratory disease. The Company has collaborations with multiple leading pharmaceutical companies including AbbVie; Boehringer Ingelheim; Eddingpharm; Merck & Co., Inc., Kenilworth, New Jersey, USA; Merck KGaA; Novo Nordisk; Sanofi and Taisho Pharmaceuticals, which have generated >€450M in non-dilutive cash to date and that have the potential to deliver >€10Bn in future milestones plus royalties.

Rapid generation of novel biologics

Immunise llamas with antigen and/or use proprietary synthetic Nanobody phage libraries

Generate a wide range of highly diverse Nanobodies with 0.1-10nM affinities

Specifically formatted Nanobodies

Cloned into microbial systems and produced through fermentation

12-18 months

Derived from heavy-chain only antibodies

Conventional antibodies

Heavy chain only antibodies

Ablynx's Nanobody

- small and robust
- easily linked together
- sequence homology comparable to humanised/human mAbs
- nano- to picomolar affinities
- able to bind and block challenging targets
- multiple administration routes
- manufacturing in microbial cells

Corporate highlights

- Proprietary platform: unique, powerful and broadly validated next generation biologics platform with >500 granted and pending patents
- Broad product pipeline: >45 wholly-owned and partnered programmes; 8 Nanobodies in clinical development; first potential product commercialisation in 2018
- Clinical data: Phase I/II clinical proof-of-concepts for 5 Nanobodies achieved; supportive safety profile in >2,000 patients
- Partners: multiple discovery and drug development partnerships with top tier pharma companies
- Cash position: €209M in cash at 30 September 2017
- Corporate: founded in 2001; Listed on Euronext Brussels and Nasdaq; >450 staff in Ghent, Belgium

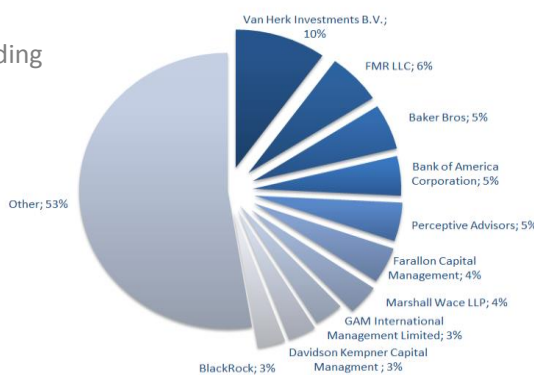

Team
Board of Directors: Russell G. Greig, Chairman Edwin Moses, CEO William Jenkins Catherine Moukheibir Lutgart Van den Berghe Remi Vermeiren Hilde Windels
Executive Management: Edwin Moses, CEO Robert K. Zeldin, CMO Wim Ottevaere, CFO Johan Heylen, CCO Markus Ewert, CBO Guido Gielen, VP HR Frank Landolt, VP IP & Legal

Investment case
<ul style="list-style-type: none"> - Unique and validated technology platform generating innovative drug candidates in a wide range of therapeutic areas, utilising different routes of administration - Well funded business supporting the development of >45 programmes, both wholly owned and in partnership, offering a balanced risk/reward profile - Company has the potential to launch its first product in 2018, caplacizumab, a first-in-class therapy for acquired thrombotic thrombocytopenic purpura in an estimated €1.2Bn market - Multiple partnerships with pharmaceutical companies that have the potential to generate >€10Bn in non-dilutive cash plus royalties on net sales - Strong pipeline with numerous short and medium term pre-clinical, clinical and regulatory catalysts expected from the proprietary and partnered programmes

Diversified shareholder base

- Listed on Euronext Brussels and Nasdaq (ABLX)
- 75M shares and 2.4M warrants (in number of shares) outstanding
- Market Cap (Jan 2018): >€3,3Bn
- Euronext Brussels (ABLX) – since Nov 2007:
 - Price 52W: €45.16 (high) - €8.85 (low)
 - Avg volume: >400,000
- Nasdaq (ABLX) – since Oct 2017:
 - Price: \$54.87 (high) - \$17.75 (low)
 - Avg volume: >500,000

Estimated breakdown of share capital based on public filings (status 14 February 2018)

Hybrid business model fuels the product pipeline: >45 programmes, 8 Nanobodies in the clinic, 9 partners

Product	Indication	Target	Pre-clinical	Phase I	Phase II	Phase III	Filing
